

DESCRIPTION

These greases have excellent water resistance properties, high oxidation stability, and maximum structural stability with superior anti-rust and anti-corrosion properties. These greases resist water washout and enjoy all round acceptance for both anti-friction and plain bearing lubrication. This meets the British Timken ALG 1/57, IS: 7623-1993, IPSS: 1-09-006 specifications and US Steel 374 requirements. These greases are widely used in steel plants, heavy engineering units, textile mills, petrochemical and chemical units.
